| 1 | MediaWikiAPI | 1 |
| 2 | Indices and tables | 3 |

MediaWikiAPI

MediaWikiAPI is a Python library that makes it easy to access and parse data from Wikipedia.

Search Wikipedia, get article summaries, get data like links and images from a page, and more. Wikipedia wraps the [MediaWiki API](#) so you can focus on using Wikipedia data, not getting it.

```
>>> import mediawikiapi

>>> print mediawikiapi.summary("Wikipedia")
# Wikipedia (/wkpidi/ or /wkipidi/ WIK-i-PEE-dee-) is a collaboratively edited, multilingual, free In
```

Go to the [quickstart](#) to start using wikipedia now, or see the [api](#).

Indices and tables

- `genindex`
- `modindex`
- `search`
